

Getting Started

1. Free Site Evaluation

- Request a site visit that will allow **RES** to perform an analysis of your energy needs to determine if a solar system is a good investment for you.
- This will include a free estimate.

2. Review of grants and funding options

- We will inform you of grants and funding options that may be available.

3. Installation of System

- Our projects are well engineered. Drawings of what the system will look like and the details of how it will be installed are reviewed with you before construction begins.
- Our team of experienced and well educated installers works with your utility to provide a turn key system of the highest craftsmanship, your project is our project. Total project is typically completed in 4 to 6 weeks.

4. System monitoring

- The advancements in energy monitoring equipment have now made it easier than ever to keep track of your energy savings.
- Many of these systems are internet based which allow you to access your system performance from anywhere.
